2023-2024 PET328

Assignment 2

Update your PET328_Class_2024 (if necessary) and fetch the Assignment_2_script.py file.

The following statement is excerpted from Slide 14 of the PET328 Week 2 Notes.

"Statements are executed in the order (sequence) in which they are encountered. Latter statements can make use of results of former statements; not vice-versa"

The purpose of this assignment is to assess your understanding of the principle of sequential execution. In the script, some statements are placed in the wrong lines. Identify the statements; copy and paste them in the right lines. Run the file to be sure it is working.

Save the edited script and push it to your copy of PET328_Class_2024 repository on GitHub. Submit the URL to your repository.
